(54) CLIENT-SERVER SYSTEM AND METHOD FOR MONITORING OPERATION OF CLIENT

(57)Abstract:

PROBLEM TO BE SOLVED: To suitably grasp the operation states of clients even when there are many clients or even when the platform of each client is different from that of a server.

SOLUTION: In the client-server system connecting plural clients 2-1 to 2-n and a server A to a network 1, the recording information of transmission from the sever A to these clients 2-1 to 2-n is collected and the operation states of the clients 2-1 to 2-n are detected based on the collected recording information. Since the recording information of transmission from the sever A to the clients 2-1 to 2-n is collected the operation states of the clients 2-1 to 2-n are detected based on the collected recording information and the detection result is outputted in the constitution, specific transmission for detecting the operation states of the clients 2-1 to 2-n is not required and the load on the network 1 is not increased.
